```
struct ChildAppWindow : TopWindow {
    ChildAppWindow();
    bool IsStop();
};

bool ChildAppWindow::IsStop()
{
    // how can i cat bStop ( In class MyAppWindow)?
}

struct MyAppWindow : TopWindow {
    MyAppWindow() ;

    bool bStop;
    void IsStop(bool& b) { b = bStop;}

    ChildAppWindow child;

};
```

One way is like below:

```
Callback<bool&> cb_IsStop;
child.cb_IsStop = THISBACK(IsStop);
```

but this is not so convenient i think :cry:
