hello friends,

I am a stupid newby U++ - just downloaded a shiny lib. SFML (designed for VC++ 10 (?)) from the net.

Now I want to add it to a project.

How to do?

Starting with:

Where do i have to put the lib files?

Where do i have to put the h hpp files?

What is the include Path?

Can I add it using the IDE?

etc.

friendly regards, elch
