Hi, I'm using painter to draw inside a big working area, let's say of 20'000 (millimeters) size, given by a rectangle from (-10000, -10000) to (10000, 10000). To do this, I write:

PaintingPainter sw(20000, 20000); sw.Translate(-10000, -10000);

I guess it's correct.

Now I want to take a viewport of my big area and display it inside a control, like following picture:

Viewport is given by its origin and a zoom/scale factor. I can't find a way to do it....
