h3l1 wrote on Thu, 03 August 2006 10:42Hi there,

I tested the DateTimeCtrl from the forum here and tried to add a german translation. There I got an assert and found the problem was in the Core.t file, the date-format and date-scan were not defined correctly.

Just removed in every german definition the leading words like date-format, date-scan etc.

So now it works.

P.S.: I am testing with 607-dev3

Speaking about datetimestrl. There will be soon available new version of datetime ctrl. It's almost ready (98%). If anyone have some sugesstions please write about them.
