I want to let you know that my UBUNTU 14.04 (AMD64) refuses the Drag and Drop operation as well.

A recent update of UPP brought in "reference" a DragAndDropImg. I generated an executable with "GUI" and "GCC Optimal". When I ran it I kept it in the starter. Both times, when active or only in the starter, dragging bushman's avatar to the starter lit Firefox and Gimp only, but not the unnamed application DragAndDropImg. So I can drop the image to Firefox or Gimp, but not to DragAndDropImg.
