Tried to upgrade an application that uses NOAPPSQL as a flag, while trying to compile got errors in the SQLCase.cpp

```
String SqlCompile(const String& s)
{
 return SqlCompile(SQL.GetDialect(), s);
}
```

it should have an #ifndef flagNOAPPSQL surrounding it, as it uses global SQL

Another is in Sql.cpp

```
void operator*=(ValueMap& map, SqlSelect select)
{
 map.Clear();
 Sql sql;
 sql * select;
 while(sql.Fetch())
  map.Add(sql[0], sql[1]);
}
```

should also be surounded by #ifndef flagNOAPPSQL as there is no default Sql constructor when flagNOAPPSQL is present.

BTW: Is this the way to report bugs, or is there a bug tracker?
