mirek wrote on Thu, 12 February 2015 15:30In theory: "All shared" in output mode.

In practice: Does not seem to work at this very moment.

Other than that, it is problematic. With .dll you have to sacrifice performance and do many things in more complicated way...

Would be nice to have possibility to specify DLL options per package (project).

So if in main package we set for example a flag USEDLL and in one package When: USEDLL

Targets: DLL that package would be builded with DLL flag and output generated as \*.dll/so.

Just a thought.

Andrei
