Thank you Honza, I miss that in the previous post.

About the icpp files, what I have done is simply create a new file like that:  
For example SqlCtrl\_init.icpp, I create a new file named SqlCtrl\_init.icpp.cpp with the content:

```
#include "SqlCtrl_init.icpp"
```

That way, I did not mess UPP sources.

But I didn't notice I have to "force" linking to the objs. I'll try that!

Btw, I have a lot of warnings like the following:

warning LNK4221: This object file does not define any previously undefined public symbols, so it will not be used by any link operation that consumes this library

Not sure if its related..
