cyrion wrote on Fri, 13 February 2015 18:30Your script is working, and creates the ini files in the bin dir, but they are not linked with the main app exe

This is wrong assumption. What I wrote in message 44261 is excerpt from actual attachment.

cyrion wrote on Fri, 13 February 2015 18:30Also, since it's constantly updating the init.cpp files, CMake recompile them all the time.

The method was created for IDEs, mainly to configure CMake files once, which allows to view/edit and build U++ package files, when needed. I didn't have issue, which you mentioned.

No need to create competition here. This topic was created for different purpose (e.g. to show the possibility in 2011 year). The semi-automatic method already exists. There are other solutions also, which not use CMake.
