Subject: Layout Designer causes compile errors

---

We have a very large application written and working for UPP 2007.

We've upgraded to upp-x11-src-1805. This required a few code changes to the application and now most everything is working again.

One exception is the use of the Layout Designer.  
The .lay files that originated from UPP 2007 can be edited by the newer IDE, but it causes build errors. It complains that functions associated with various Widgets are not available. The ordering of parameter setting changes in the .lay file after editing.

So, we are not able to edit any .lay file without causing build errors.

Have you heard of this problem when migrating a UPP application to the newer IDE from circa 2007 UPP?

Any suggestions on what might be done to fix this issue?

regards,  
Jeff Franks
