Hello Edward,

You should create instance of "Form1Dlg" and run it instead of "Form1":

```
GUI_APP_MAIN
```

```
{  
  Form1Dlg().Run(); // ***** Displays Form 1 perfectly *****  
  //Form2Dlg().Run(); // ***** Displays Form 2 perfectly *****  
}
```

It seems you have unnecessary class "Form1". In this class you didn't define any implementation of "btnForm2" action. So, for me it seems that this is school mistake ;)

Sincerely,
Klugier
