Hello,

I would like to show my last year project for my studies. It was implemented on "Programing games in C++" course (2013/2014 - summer). This is simply 2D platform game with level editor.

Features:

- level is represented by special xml file (save/load feature is implemented).
- level debugging feature.
- whole written in Upp.
- game is rendering using "Painter".
- game scrolling. (Level can be bigger than screen resolution)
- layers support.
- around 2,5K lines of code.

Sincerely,
Klugier
