Hi,

I have a problem, I do not seem to be able to use scatterctrl.
I have a tabctrl. I have a layout which contains scatterctrl.

Layout is added to the tabctrl.

```
Vector<Pointf> data_equity,data_balance;  
performance.chart.RemoveAllSeries();
```

```
for (int i=0; i< order_history.order_info.GetCount();i++)  
{  
    data_equity << Pointf(i,order_history.order_info.Get(i,7));  
    data_balance << Pointf(i,order_history.order_info.Get(i,8));  
  
}  
performance.chart.AddSeries(data_balance).Legend("balance");  
performance.chart.AddSeries(data_equity).Legend("equity").Units( "km/h").NoMark().Stroke(2,  
Gray()).Dash(LINE_SOLID).Fill(LtGray());;  
/  
if I add series , it crashes when I switch to the tab which contains the scatterctrl.
```

```
case WM_PAINT:  
    ASSERT(!painting || IsPanicMode(), "WM_PAINT invoked for " + Name() + " while in Paint  
routine");  
    ASSERT(hwnd);  
    if(hwnd) {  
        PAINTSTRUCT ps;
```

It fails for M_PAINT invoked for " + Name() + " while in Paint routine");

I use the latest upp.
