Subject: SqlArray row validation bug

I tried to use WhenAcceptRow to validate user input, but when returning false, the changes of fields other than last modified fields disappiered from array and database.
I have changed Accept() method to:

```
bool  SqlArray::Accept() {
 bool b = ArrayCtrl::Accept();
 if(b) Ctrl::ClearModify();
 return b;
}
```

And now it seems to be working well.
