bonami wrote on Tue, 17 March 2015 06:17Is GCC not recognized on launchpad servers?

I guess, there is a need to create the GCC build method (GCC.bm) file inside of

"/home/buildd/.upp/umk" directory, based on your output information.

You can also pass full path to the *.bm file instead of just GCC. See the examples in documentation.

Best regards,

Honza
