if a line has more than 1024 character, gdb insert an "\n" and continue in the next line.

```

...

...

...

(gdb)

then i propose this patch:

in function Gdb_MI2::ParseGdb
file Gdb_MI2Gdb.cpp
line 51:

```
String s = TrimBoth(ss.GetLine());
```

to be replaced by:

```
String s;  
String str = ss.GetLine();  
s = str;  
while(str.GetCount() == 1024 && !ss.IsEof())  
{  
    str = ss.GetLine();  
    s << str;  
}
```

```
s = TrimBoth(s);
```

best regards
omari.
