mirek wrote on Sat, 04 April 2015 09:42l would rather add "headers" last parameter as either const String& or const char *, which would simple would be put to postdata before the actual data. That way is more alike to Headers method. Do you agree?

Mirek

I don't think it is a good solution. Beside headers in each attachment, I would like to be able to modify content-type header, which is hard-coded in Part function:

```
ContentType("multipart/form-data; boundary=" + multipart);
```

It would be better to have another "low level" Part function (Part0 or PartLL) with content-type and attachment headers configurable.

And of course "old" Part function should use this new "low level" Part.
