Hi Koldo,

Quote:In my case, I have to compile ".cu" files and link them with the project.

For example, now, for demo.cu file, I have to:

- Compile it with "nvcc -c demo.cu" to get demo.obj
- Add demo.obj in U++ project libraries
- Compile it in U++

This should be possible with custom build step...

Quote:Additionally it would be great to let U++ to highlight .cu and .cl files as .cpp files.

You can set per file highlighting (right click on file in package -> File properties). I don't think it is possible to set this globally for all files in all packages.

Best regards,
Honza
