mtdew3q wrote on Mon, 04 May 2015 07:13Hi-

I followed the link to the macro. I kind of get the mini scripting language. I couldn't figure out after I create the macro where to put the .usc file and how to execute it though.

Where is the common or local directory? I think they are bound to a key combination... right?
Just put the *.usc file in your pacakge.

You can bind a keyboard shortcut to the macro, or you can execute it via Macro menu, which appears in theide as soon as you have any package containing usc file in your project.
