I've managed to fix the default printer issue, by editing the file: PrinterJob.cpp

the default printer fetched by "lpstat -d" has a space at the front and new line/carrage return at the end.

by adding:

```
if(p.StartsWith(" ")){ p = p.Mid(1); }  
p.Replace("\r","");  
p.Replace("\n","");
```

after: String p = h.Mid(q + 1); (line: 288)

this is now fixed in my copy. but as Im new to ultimate++ / C++ if someone has a better / simpler way, it would be appreciated.

I still dont know why a chosen printer is not used and the default / first is.
