I have tried some initial fixes in theide and CtrlLib for HiDPI - basically, HiDPI should be now detected (based on font size), and as first test, toolbar icons are upscaled (in ideal worlds, we would be using svg or be downscaling big icons for non-HiDPI, but to maintain compatibility, upscaling is what we should try first imo).

Also, layout bugs in theide were fixed.

Please test and report (but be aware that theide is now in transition to new Assist++ and new features are not quite finished yet).

Mirek

(Note that this update does not deal with monitor DPI issues yet.)
