cbpporter wrote on Thu, 11 June 2015 10:12Hi!

I need a a simple editor with syntax highlighting and I am trying to see if the CodeEditor class could make this task easier.

So far so good, but I can't figure out how to get it to try and highlight syntax using one of the supported cases, like HTML.

Is there an simple way to do it?

Sure. Check SqlCtrl/SqlConsole - it is using CodeEditor to edit SQL statements.

And what does the "F" in the top right corner of the package icon for CodeEditor mean?
[/quote]

"FAST" - optimize the whole package for speed (in optimal build).
