Interesting overview here:

<https://wiki.qt.io/MinGW-64-bit>

Now I have rechecked Mingw-w64. It works fine, more or less, the problem is speed - while it takes 30s for MSC to recompile debug theide, for mingw it is twice as much (~65s). Worse, significant part is spent in linker (~15s), which has to be done even on recompiling the single file... :(

It is really mess. The only chance is clang...
