Could it be possible to Add

```
void Set(const String& s);
StringBuffer(const String& s){ Zero(); Set(s);}
```

to StringBuffer in uppsrc/Core/String.h
and

```
void StringBuffer::Set(const String& s)
{
    int len = s.GetLength();
    if(0 < len) {
        SetLength(len);
        memcpy(begin, s.Begin(), len);
    } else {
        Zero();
    }
}
```

in uppsrc/Core/String.cpp

Sometimes I need top create a string buffer from a constant string to edit in a copy without affecting the original.
