Hi jfranks,

File build\_info.h is generated by TheIDE when building. It should be overridden by -Dbm{YEAR,DAY,...} on command-line when building from source. But it is not, judging by the error you posted. I'll look at it tonight when I get home from work and try to figure out why.

This code hasn't been touched for months, it is weird that you'd be first to notice that it is broken :)

Best regards,  
Honza
