Thanks Klugier,

Mirek fixed the issue in tarball 8780. The full list of required libraries appears to be

yum groupinstall 'Development Tools'
yum install bzip2-devel
yum install expat-devel
yum install libnotify-devel
yum install gtk2-devel
yum install cairo-devel (not sure needed as might be part of group install)
yum install atk-devel (not sure needed as might be part of group install)
yum install pango-devel (not sure needed as might be part of group install)

Thanks,

Nick
