Hi,
I found following comments in another forum:
-> You can use AS for table aliasing on many SQL servers (at least MsSQL, MySQL, PostrgreSQL) but it's always optional and on Oracle it's illegal.

So, I changed the following Code:

---------- SqlStatement.cpp ----------

```
SqlSet SqlSelect::AsTable(const SqlId& tab) const
{
 StringBuffer t;
 t << SqlCase(MSSQL|PGSQL, "")("(")
   << "(" << text << ") " << SqlCase(ORACLE,"")("as") << "  \t" << tab.ToString() << '\t'
   << SqlCase(MSSQL|PGSQL, "")(")");
 return SqlSet(String(t), SqlSet::HIGH);
}
```
