Hi Koldo,

Interesting (and good) idea.

koldo wrote on Fri, 14 August 2015 11:00Of course this is not a solution valid for all situations, as anybody externally could have modified a file in a package that casually could be the last one to be checked.

This could be solved by ordering the packages by last-modified-date of their directory. That would catch even external modifications.

Best regards,
Honza
