I removed ~/.upp and ~/Upp directories and downloaded the newest version from svn (8813), but the problem persists.

It doesn't matter if I add "-std=c++11" via package organizer or setup/build methods.

I made the same test on another computer. After upgrade to svn 8813, gcc started showing the same errors.

If I remove these lines (from Defs.h):

```
template <typename T>
T&& pick(T&& x) { return static_cast<T&&>(x); }
```

gcc stops complaining.
