---

```
void AboutForm::Paint(Draw& w)
{
    if(m_Tick++ > 10)
    {
        m_Tick = 0;
    m_Water.WarpBlob(rand()%320,rand()%512,rand()%320,rand()%302,m_Water.m_iHpage);
    }
    m_Water.Fdensity = 5;
    m_Water.FbDrawWithLight = FALSE;
    m_Water.FbCalcBigFilter = FALSE;

    //// DWORD m_Imgeln[320*512],m_ImageOut[320*512];
    m_Water.Render(m_Imgeln,m_ImageOut);

    memcpy((void*)m_DestImage.Begin(),(void*)m_ImageOut,320*512*4); // Direct

    //w.DrawImage(0,0,320,512, m_DestImage); //---- Ceases to work after the first run ???

    w.DrawImage(1,1,320-1,512-1, m_DestImage); //---- Working
    SetTimeCallback(10, THISBACK(Render));
}
```
