dolik.rce wrote on Fri, 14 August 2015 12:01Hi Koldo,

Interesting (and good) idea.

koldo wrote on Fri, 14 August 2015 11:00Of course this is not a solution valid for all situations, as anybody externally could have modified a file in a package that casually could be the last one to be checked.
This could be solved by ordering the packages by last-modified-date of their directory. That would catch even external modifications.

Best regards,
Honza

Not really helpful as checking these last-modified-dates is exactly what takes so long... well, that is educated guess, I am not quite satisfied with speed too, so I guess some profiling is needed here.

That said, starting with last the last modified package in current ide session is not a bad idea at all!
