Klugier wrote on Thu, 27 August 2015 20:03Hello deep,

Just use NoLayoutZoom() method in your class constructor. Example:

```
class MyLayoutClass : public WithMyLayoutClassLayout<TopWindow> {
public:
    MyLayoutClass() {
        NoLayoutZoom();
    }
};
```

NoLayoutZoom() is defined in Ctrl class.

Sincerely,
Klugier

Caution: NoLayoutZoom is not bound to single instance. It is static method and it stops zooming globally (for all layouts).
