Subject: Select word wise for CodeEditor/IDE
Posted by Typhoor on Mon, 07 Sep 2015 11:21:42 GMT

Hi Mirek & al,
I always likes the function of other editors to select word wise like in MSC, Notepad++, etc.

Selecting a word with double click, then move mouse while left button still pressed selects all the "words" between initital mouse down point and current mouse position...

I tried to code it with least impact, have a look at it.

Patch is against 8904...

Greetings Ralph
