My take:

Www site should be now regenerated using the uppweb package regularly anyway, as I am now adding quite a lot of new topics. (In fact, I made a "woe" to add one code-reference topic and one tutorial topic each day

In fact, there was news system in uppweb implemented, later I have removed that feature when redesigning the website, mostly because I had no energy to write the news

So for the moment, the simplest thing to do IMO is to make it back. Blog entries would simply be written in topic with specific name. Just take a look at topic++ of uppweb - there is www_news group with some old entries.
