Subject: How to close a sqlite session

Hello,

after opening a sqlite db i need to close it and open a new one.
How to properly close the first db session?

I see the .Close() and .SessionClose() method.
Which one should I use? Are they different?

Thanks,
Luigi

EDIT: SessionClose() although visible is private. So remain Close().
However it seems my app does not close properly the session and after opening a new db it does not work as due.
