koldo wrote on Fri, 16 October 2015 09:07Hello all

Sometimes for example handling file names, it is necessary to show in QTF strings that have some characters that are not UTF8. Unfortunately the QTF output gets broken with an ugly bold non UTF8 error message.

I really doubt the "necessary" part here...

Quote:
Is it possible to transform a dubious string into a right UTF8 string by, for example, substituting wrong chars with a symbol (a square or other)?

Anyway, this is perhaps possible. Still, I would say error should be displayed....
