Based on reply by unodgs: http:// www.ultimatepp.org/forums/index.php?t=msg&th=6809&goto=36746&#msg_36746
The following code hangs when a tab is clicked:

```
#include <CtrlLib/CtrlLib.h>
#include <TabBar/TabBar.h> //must add package TabBar

using namespace Upp;

struct test_tabbar : public TopWindow
{
 typedef test_tabbar CLASSNAME;
 TabBar TB;
 test_tabbar();
 void ontab();

};

test_tabbar::test_tabbar()
{
 Title("test_tabbar");
 Add(TB);
 TB.HSizePosZ(0, 0).VSizePosZ(0, 0);
 TB.AddKey("one", "tab one");
 TB.AddKey("two", "tab two");
 TB.AddKey("three", "tab three");
 TB.WhenAction = THISBACK(ontab);
}

void test_tabbar::ontab()
{
 PromptOK(TB.Get(TB.GetKey(TB.GetHighlight())).ToString());
}

GUI_APP_MAIN
{
 test_tabbar().Run();
}
```
