I am using this for save confirmation:

```
int PromptSaveDontSaveCancel(const char *qtf) {  
    BeepQuestion();  
    return Prompt(callback(LaunchWebBrowser),  
                  Ctrl::GetAppName(), CtrlImg::question(), qtf, true,  
                  t_("&Save"), t_("&Don't Save"), t_("Cancel"), 0,  
                  CtrlImg::save(), NoButtonImage(), Null);  
}
```

I can't add it to my code base because the Prompt is not public. Could we either get this method added to headers and sources or have the Prompt made public?

Thanks!
