With all major issues resolved, I am happy to announce 2/2015 beta release.

The main focus for this release was huge upgrade of Assist++, C++11 and Android builder.

Win32 'installation' was changed to 'portable' style (no install, no registry changes) and there once again is a version coupled with mingw (in fact, TDM64).

Full list of changes is here:

http://www.ultimatepp.org/www$uppweb$Roadmap$en-us.html

You can download beta here:

http://www.ultimatepp.org/downloads/upp-x11-src-9127.tar.gz
http://www.ultimatepp.org/downloads/upp-win-9127.7z
http://www.ultimatepp.org/downloads/upp-mingw-9127.7z

Known issues:

- mingw has broken optimizer so maximum working optimize level is -O1

- C++11 mode is now default, so new style pick/clone is active. If you see compiler compaining about "deleted function" or similar weird errors, you usually need to add pick or rval_default to your code. See http://www.ultimatepp.org/srcdoc$Core$pick_$en-us.html

Please, download and test!
