Hi Forlano,

forlano wrote on Mon, 09 November 2015 16:48lsb_release: command not found

what am I missing?
You're missing lsb_release command, which can be found in package lsb-release. You can simply install it with apt-get install lsb-release

Also, you should use different repository. I no longer maintain the repository linked from download page, where you probably found this. Sorry for that, I'll try to correct the information soon.

Just create a file /etc/apt/sources.list.d/upp.list or similar with this contents:
/etc/apt/sources.list.d/upp.list
U++ nightly builds (comment out if you don't want to use nightly builds)
deb http://download.opensuse.org/repositories/home:/dolik_rce:/n ightly/Debian_7.0 ./

U++ release builds (uncomment if you want to install stable releases)
#deb http://download.opensuse.org/repositories/home:/dolik_rce/De bian_7.0 ./

Then add keys for apt:
apt-key adv --fetch-keys
http://download.opensuse.org/repositories/home:/dolik_rce:/nightly/Debian_7.0/Release.key
apt-key adv --fetch-keys
http://download.opensuse.org/repositories/home:/dolik_rce:/Debian_7.0/Release.key

Now you can install theide, umk and/or upp sources withapt-get install theide umk upp

I hope the instructions are correct, I wrote them from my head... If you encounter any problem, let me know, I'll try to provide better help.

Best regards,
Honza
