Hello Giorgio,

I think your code is hard to read for person that is not familiar with your language. It will be good if next time the code will be written in English. Backing to your problem, I think you wrongly assign callbacks (.

```
dlgInserisciOEE.ok << THISBACK(dlgDatiOkPressed);
dlgInserisciOEE.btnStampa << THISBACK(StampaRicevuta);
```

Should be,

```
dlgInserisciOEE.ok <<= THISBACK(dlgDatiOkPressed);
dlgInserisciOEE.btnStampa <<= THISBACK(StampaRicevuta);
```

Alternatively you can use When... clausul:

```
dlgInserisciOEE.ok.WhenAction = THISBACK(dlgDatiOkPressed);
dlgInserisciOEE.btnStampa.WhenAction = THISBACK(StampaRicevuta);
```

Please test and let me know if this works for you. I tested on Kubuntu and it seems ok - after above changes in code.

P.S.
Ultimate++ is designed to not used "delete" keyword with its components :)

Sincerely,
Klugier
