Thank you for your help.

I did what you suggested.
Nightly build upp-x11-src-9242.tar.gz was downloaded,
installed, and used to rebuild our application.

I reverted the modifications in the serial port
shared library and restored the original stdc++ strings,
and then recompiled and re-installed it.

The test results have not changed. We still have
memory heap errors on application exit.
Examination of the log file showed that U++ memory
diagnostic is still tagging the stdc++ strings from
the serial port shared library. Also, the pattern
of leaks with size 812 and 828 has not changed except
for the total number of each, which is now 162.

Conclusion: testing with nightly build 9242 shows that the
issue is not resolved.

What else that can be done?
