Thank you for continuing to help us on this issue.

The nightly build 9246 was downloaded, installed, and used to build our application.

The result is the same as previous ...

Heap leaks detected!

Segmentation fault

The log file contains the same pattern of 164 pairs of size = 812 & 828.

This is followed by the last 7 breakpoints

that correspond to stdc++ strings in the serial port shared library.

Is there something else that can be done to try and fix?
