cbpporter wrote on Tue, 15 December 2015 12:07Hi Mirek,
Currently, there is an enum describing a bunch of hard-coded languages and a few tables with hard-coded positions.

I am not quite sure this is the completely correct description.

Yes, styling elements (like color of comments) are currently hardcoded. However, CodeEditor is already open w.r.t. language syntax descriptions. You can register your own syntax, with text id, with `EditorSyntax::Register`. You can then activate this syntax using this text id with `Highlight`.
