koldo wrote on Thu, 17 December 2015 12:44Hello all

I wanted to ask you how to set a child Ctrl as the top most visible one.

Is there a kind of SetChildIndex()?

Topmost visible is the last one. It is OK to insert/add Ctrl that is already somewhere, Ctrl code will remove it first. So the easiest way should be just to add it again:

```
dlg.Add(ctrl);
```
