The problematic brackets come from SqlSet(). You actually want just a single value, not a set of values:

```
SqlUpdate(LINK)(ID_OTHER, SqlSet(Select(ID_TWO).From(TWO).Where(NAME_TWO ==  
"Name"))).Where(ID_LINK == 1);
```

This should work as you intended.

So I tried to write, but I receive an error

```
error C2664: 'Upp::SqlUpdate &Upp::SqlUpdate::operator()(const Upp::SqlId &,Upp::SqlVal)' :  
cannot convert argument 1 from 'Upp::SqlId' to 'const Upp::SqlSet &'  
Reason: cannot convert from 'Upp::SqlId' to 'const Upp::SqlSet'
```
