
Subject: TopWindow Partial Invisibility Option?

I would appreciate to carry on with the idea of a trimmed TopWindow in the thread "No title bar and no frame, just Image or Ctrl":

Is it possible to create a TopWindow which

1.
normally has no frame
2.
has a transparent view
3.
but shows a widget in this transparent view
4.
and optionally looks like a standard TopWindow?

In other words:

Can I create a TopWindow which shows but - e. g. - a filled ellipse and "pops up" the rest of itself when the ellipse is right-clicked?

Werner
