Hi!

I have two very silly problems which I could not fix as per my satisfaction.

In my code I have menus and one of them is plot. In this plot menu I have a layout in which there is a droplist entry with name "pltType". I tried many ways yet I could not put any option there.

Next, how can I read a data file and use for plotting using scatterCtrl? I find that LoadFromFile reads in string. How can I put Serialize?

Thanks and Regards

Abhijit
