Subject: [Bug?] mismatching closing brace with opening brace

I've managed to identify the cause as demo'ed in this code:

```
void dummy()
{
 if (a)
 {
  if (b)
  {
   //putting brackets around qouted string containing a s-quote
   //cause the closing brace to mismatch it's opener

   c=('"'); //cause mismatch of closing brace
   //c=('"'); //cause mismatch of closing brace
   //c=("\'"); //cause mismatch of closing brace
   //c=('\'); //cause mismatch of closing brace

   //c='\''; //ok
   //c=(""); //ok
   //c=("\""); //ok
   //c='"'; //ok
  } //<<<--- placing cursor here will hi-lite brace at 'if (a)'
 }
}
```

Don't know if this is just a decrement too many, or a symptom of another problem...
