Giorgio wrote on Wed, 27 January 2016 14:30Hi there,
According to the documentation the following query should return 001 and 002: "Select ID, From
MACHINISTS Where M3 = true;", but actually it returns only 002. If I use the following query:
"Select ID, From MACHINISTS Where M3 is true;" I get correct results, i.e. 001 and 002. So
MySql is picky, but is coherent.

Have you tried this which you have stated. Which is working.

query * Select(ID, NAME).From(MACHINISTS).Where(M1 is true);

It may be good idea to check first with "select *" and confirm your table is updated.
